

Veteran-Owned, Small Business
Capabilities Statement
February 2011

In its sixth year, Sutter Systems L.L.C. continues as a premier Information Technology and systems security contractor. Our employees are some of the industry's most experienced information technology experts. But unlike our competitors, we don't try to be all things to all customers.

We maintain four niche specialties:

Federal Information Security Management Act (FISMA) Auditing: Every Federal government agency is required to undergo a FISMA audit annually. The regulatory process can be daunting. Our consultants are experts at keeping abreast of the changes within NIST and OMB's ever changing requirements. We focus primarily on helping our clients meet the FISMA provisions while working on creating or maintaining a strong data protection program.

Information Technology Design and Strategy: We understand how technology can often be a solution in search of a problem. With a staff of several former Federal CIOs, engineers and some of the industry's most well-known application specialists, we can assist the leadership's business goals with recommended technological improvements that prove increased capability and cost savings.

Web Application and Technology Implementation: We have helped several clients design and develop web applications to meet specific requirements. By keeping apprised of the ever-changing web frame work(s), our consultants have earned a great reputation within the Federal IT-space. In addition, our consultants are often asked to assist in the implementation and operations of our customer's technology enterprise. We have past successful past performance in systems integration and data center operations.

Information Technology Risk Management: Risk management is one of the most underutilized processes in the Federal government information technology field. Viewed mostly as "too expensive", most CxOs tend to only have basic plans for the eventuality of data loss. Our consultants can provide leadership with actionable plans for their most critical data and IT operations infrastructure. We have tremendous experience with protecting the Nation's most critical data.
